Oppose

I believe that this development would create a danger to pedestrians and traffic in the direct area of the development.

The increase of traffic on the small T intersection and adjacent feeder roads would change the road dynamic in the area to confusing levels. I am assuming that this would happen in the morning and afternoon. This particular intersection is difficult to manoeuvre in busy times. If traffic was to increase, drivers would be distracted for all the normal reasons that drivers get distracted and I fear trouble could follow on a regular basis mainly because people are people.
